

### Water Boost Systems

The increase popularity of non-carbonated drinks and the inconsistency of city water pressure and flow requires the need for a Water Boost System to deliver quality drinks in many installations. SHURflo's Water Boost Systems are for applications where low, fluctuating, or no water pressure exists. The pump and accumulator tank maintain consistent water pressure to one or more dispensing valves. The pumps and tanks are NSF, UL and CSA listed.

The illustration below shows typical applications, which may require a water boost system.
