

MK9 CO2 Safety System

Part # 2049

Gulf Ice Systems

Carbon dioxide detector and alarm system

Designed to measure CO2 concentration in a confined space environment. It provides an alarm in the event that a CO2 level is considered unhealthy/dangerous in accordance with existing safety codes in the area being monitored.

- **Automatic calibration**
- **Upto 8 sensors can be connected**
- **Easy-to-read digital displays**
- **Audible horn alarm and strobe lights**
- **Protects staff and customers from CO2 risk and injuries**
- **Important: A CO2 certified agent is required to install the system.**

CO2 Alarm Sensor MK9

Central Unit MK9

Optional items are also available for use with system:

- > Relay RCB
- > SMB & Shut Off Valve
- > Additional Remote Horn/Strobe
- > Additional Connectors & Cables

CO2 is a heavy gas that accumulates in the lowest areas filling the environment from the floor and up.

The CO2 sensor should be mounted approximately 12" from the floor and within a 15' radius from the point of CO2 distribution.
